**16.6 Further information:** According to the guidance version 2.0 for monomers and polymers from the European Chemicals Agency dated as of April 2012, the classification of the polymer considers the classification of all its constituents, such as unreacted monomers. These constituents in fact should be considered for classification of the polymer. This means that the same classification methods as for mixture should be applied to polymer substances. To determine a classification for the studies about the water-soluble fraction as well as the absorption should be performed on the polymer as such.
